

Flexware Asset Web Monitor

Developed in conjunction with Preditec, an engineering firm specializing in electronics and systems for production reliability, data monitoring and diagnostics in process plant machinery, the Flexware Asset Web Monitor is a system focused software solution designed specifically for continuous monitoring, evaluation, and analysis of critical equipment efficiency, vibration and associated auxiliary data and systems along with multitudes of other equipment including pumps, fans, wind turbines, motors and gearboxes. It is a package that offers vibration monitoring and analysis, process data trending, compressor, steam turbine and gas turbine thermodynamic efficiency, and real-time access to key performance indicators including forecasting of trends, that can be accessed from a smartphone, tablet, or computer.

AWM
Asset Web Monitor

Asset Web Monitor (AWM) is a platform that **brings together all the information** from predictive diagnostic systems **to a single environment accessible from any location**

Eliminate information-access problems of access to information, while providing the analyst with powerful tools for diagnostics and generation of predictive reports.

AWM, a single diagnostic platform that brings together all the information needed for a predictive maintenance plan for monitoring in the cloud.

AWM
Asset Web Monitor

This system compliments a plant's predictive and proactive maintenance strategy:

- ✓•Flexware's compressor & turbine performance evaluation
- ✓•Vibration analysis and monitoring for all turbomachinery including pumps, fans, wind turbines, motors and gearboxes and multitudes of other equipment.
- ✓•Trending of data
- ✓•Forecasting of trends
- ✓•Remote access to data
- ✓ Free access to Flexware's team of performance and vibration experts
- ✓•Low cost

While developed as an ultra-secure, web-based system, the option remains to install all software on the client site to further enhance security by keeping all data in-house.
